Transforming Innovation Intelligence

Meet FluidityIQ

For legal and business professionals driving innovation, analyzing patent data can be time-consuming, complex, and costly. That's why FluidityIQ has built a research platform designed for IP intelligence, powered by advanced AI. With FluidtyIQ, uncovering meaningful insights becomes faster, easier, and more cost-effective – no specialized expertise required.

FluidityIQ

Patent Searching Reimagined

Unlike traditional patent intelligence tools, FluidityIQ's AI-native architecture provides a seamless, intuitive search experience paired with highly relevant, contextualized results, proactively empowering your entire team from start to finish of the innovation journey.

Patent Search for Everyone

Leverage AI to automate search strategy creation and make patent intelligence accessible across your organization – no Boolean logic or search expertise required.

Fast-Tracked Insights

Powerful tools make it easy to quickly find the signal in the noise, stay informed as the innovation landscape changes, and share your findings with key stakeholders.

Better Data-Driven Decisions

With affordable insights at your fingertips, IP searching is no longer limited to a subset of assets or projects. Access to better information across your portfolio means less guesswork and improved outcomes.

FluidityIQ

Powerful Capabilities at a Glance

FluidityIQ transforms patent research, dramatically reducing the time and cost associated with critical business challenges – whether it's corporate discovery and surveillance or legal tasks like patentability and freedom-to-operate assessments. By simplifying the research process, FluidityIQ empowers you to make faster, more informed decisions.

1: Craft your search strategy

Type and Go Search
Better than Boolean, our AI-driven tool generates a robust search strategy from simple text, like an invention description.

Secure Searching
Though intelligent, we've purposely designed the search to avoid "learning" from queries, ensuring your ideas remain confidential.

Secure in Context
Further inform or update search strategies with product information, specs, or proprietary research documents.

2: Curate your top results

Classification Groups
Quickly surface key results with a smart similarity scoring algorithm that groups and sorts search results.

Quick Filters
Refine results by classification groups, assignees, jurisdictions, status/type, priority date or bookmark.

Digital Research Assistant
Easily drill down into the result set to interrogate data with natural language and a user-friendly interface, including suggested prompts, such as create patent summaries.

3. Capture + Build Knowledge

Private Innovation Libraries
Organize related active searches and result sets in respective private libraries, alongside relevant artifacts such as notes and invention descriptions for a holistic collection.

"Always On" Updates
Easily surveil key technology areas with dynamic, persistent searches that update your own private library with the latest data over time.

Insight Resilience
Keep research progress moving by ensuring knowledge continuity and secure organization of robust insights across your portfolio.
