

Community Product Pamphlet

Key Feature Symbols

ABENA products are labelled with symbols that indicate various product qualities and specifications. Learn what each of the symbols mean below.

Top Dry System

Provides rapid absorption and a dry surface even after multiple voids. Contributes to maintaining a healthy skin balance.

Protective Leakage Barriers

Efficient barriers and latex-free elastics ensure a snug body fit, minimising the risk of leakage.

Skin Balanced

A combination of 100% breathability, Top-Dry and leakage protection provides a dry surface and healthy skin even after multiple voids.

Odour Control

The product is designed to encapsulate odour and minimise any unpleasant smells, enabling the user to feel confident while wearing the aid.

100% Breathability

Made from fully breathable material to allow moisture and heat to evaporate from the user's skin. Comfortable to wear for a longer period of time.

Performance Core

Consists of an Acquisition and Distribution Layer, long fluff fiber structures, and positioned Super Absorbent Polymers to ensure fast dispersion, high retention, absorption and a dry surface.

Nordic Swan

The Nordic Swan Ecolabel is recognised worldwide for their strict requirements for health, quality and environment. Comes from the Nordic Council of Ministers to be used in the Nordic countries.

FSC®

Forest Stewardship Council® is an international organisation dedicated to the promotion of responsible forest management. FSC®-certified products are made from well-managed forests and responsible sources. Learn more at www.fsc.org

Dermatologically Tested

The Dermatologically tested symbol guarantees that a product has been tested for potential skin reactions by an independent third-party laboratory.

Wetness Indicator

Several ABENA products are designed with a wetness indicator that allows you to see how much capacity has been utilised and can be referenced in documentation and reporting.

The wetness indicator consists of a liquid-sensitive strip that changes colour or fades out to indicate when the product is fully utilised and needs to be changed.

pH Levels

Potential Hydrogen (pH) is the concentration of protons "H" in a solution. Different studies have found that healthy skin has a pH value between 4 and 5.9 depending on body position, health and age.

ABENA's philosophy is to minimise or remove chemicals in products wherever possible. ABENA incontinence products have textile pH values of between 5.3 and 6.4 and will return to that state after urine is absorbed in the product core.

Drop System

ABENA labelling uses a 'drop system' which serves as a guide to help choose a product with the right absorbency for individual needs. The more drops, the higher the absorption capacity.

- 1-3 Drops = Light Incontinence**
- 4-5 Drops = Moderate Incontinence**
- 6-8 Drops = Heavy Incontinence**
- 9-12 Drops = Very Heavy Incontinence**

Product Ranges

Shaped Contenance Aids

ABENA San Premium

ABENA San Premium is a range of anatomically shaped, high-performance incontinence products ranging from light to very heavy incontinence. Sizes 1 to 4 are thinner in design and fitted with an adhesive strip that secures the aid to underwear. They are suitable for those who experience light to moderate incontinence. Sizes 5 to 11 have a higher absorbency capacity and should be used with fixation pants for moderate to high incontinence.
